Linisol Bouw Support BV

Linisol Bouw Support has its origins in a merger between Linisol Group and Bouw Support Echt, and performs the following activities: support construction, scaffolding, fire retardant transits and covering for commercial and industrial construction as well as industrial projects.

Supportconstructions

Supportconstructions are built using the Matemco Kwik Scaffolding-Decking 'Valkop' system. Of course Linisol Bouw Support also provides drawings and calculations for these constructions.

Our area of operations in the field of support constructions covers the whole of the Netherlands.

Scaffolding

The scaffolding used by Linisol Bouw Support is the kwik-scaffolding system. However, we also provide the possibility of installing/removing scaffolding using materials provided by our clients.

Fire resistant activities

Due to our many years of experience in the field of fire resistance we can provide our clients with customised advice based on a large diversity of materials and applications for both fire resistant sealing and fire resistant covering of installations, walls and ceilings.
